

SEED INVESTMENT OPPORTUNITY · CLIMATE SOFTWARE

Lumen Orchard Labs

Energy intelligence for cold-storage operators—turning refrigeration data into measurable savings and operational control.

Canada + US

B2B SaaS

Seed

THE PROBLEM

Cold storage wastes energy without showing operators where

Invisible

EQUIPMENT DRIFT

Operators see the utility bill after losses occur, not the compressor behavior causing them.

Manual

OPERATIONAL DIAGNOSIS

Controls, maintenance, and utility data live in separate systems and spreadsheets.

Unproven

EFFICIENCY ROI

Projects stall when savings cannot be measured against a defensible baseline.

PROBLEM STATEMENT

Target customer: multi-site cold-storage operators with commercial refrigeration and interval-meter data.

PRODUCT

From raw facility signals to prioritized energy actions

**VERIFIABLE CLAIM • PRODUCT • HIGH**

As of June 30, 2026, the production platform ingests interval-meter and refrigeration-control data and produces site-level anomaly alerts.

MEASURED CUSTOMER OUTCOME

Deployment cohort shows repeatable energy reduction

Measurement basis: weather- and throughput-normalized pre/post interval data. Demo figures require independent customer reports for real verification.

VERIFIABLE CLAIM · PRODUCT · HIGH

Across 12 completed deployments measured through June 30, 2026, customers recorded an average electricity reduction of 12.1%.

VERIFIABLE CLAIM · PRODUCT · MEDIUM

The median production deployment time across the same 12 deployments was 14 calendar days.

TRACTION

Commercial adoption with a clear revenue bridge

18

PAYING LOCATIONS

\$18k

JUNE 2026 MRR

\$216k

ANNUALIZED RUN-RATE

94%

GROSS RETENTION

VERIFIABLE CLAIM · TRACTION · CRITICAL

As of June 30, 2026, 18 customer locations were paying for the platform.

VERIFIABLE CLAIM · TRACTION · HIGH

June 2026 monthly recurring revenue was USD 18,000.

VERIFIABLE CLAIM · FINANCIAL · HIGH

Annualized recurring revenue based on June 2026 MRR was USD 216,000.

VERIFIABLE CLAIM · TRACTION · HIGH

Gross customer retention for the twelve months ending June 30, 2026 was 94%.

REPEATABILITY

A focused land-and-expand motion

Land one facility

Start with a 30-day baseline and one operational savings workflow.

Prove measured ROI

Review normalized savings with finance and facility operations.

Expand the portfolio

Reuse connectors and playbooks across additional customer locations.

VERIFIABLE CLAIM · TRACTION · MEDIUM

Six of the first eight customers expanded from one location to at least one additional location by June 30, 2026.

VERIFIABLE CLAIM · TRACTION · MEDIUM

The median sales cycle for customers signed in the first half of 2026 was 47 days.

MARKET

Start narrow, then expand through the refrigeration stack

Beachhead

Canadian and US cold-storage operators managing energy-intensive refrigeration across multiple sites.

- Cold-storage warehouses
- Food distribution centers
- Temperature-controlled logistics

Expansion vectors

- Automated controls optimization
- Measurement and verification reporting
- Maintenance prioritization
- Utility and incentive workflows

VERIFIABLE CLAIM • MARKET • HIGH

The initial target segment is multi-site cold-storage operators in Canada and the United States with interval-meter data and commercial refrigeration controls.

BUSINESS MODEL

Recurring software revenue tied to managed locations

\$1,000

AVERAGE MRR / LOCATION

Platform, monitoring, reporting, and standard connectors.

81%

JUNE GROSS MARGIN

Software delivery with remote onboarding and partner-supported controls work.

14 mo.

ILLUSTRATIVE CAC PAYBACK

Founder-led sales transitioning to channel-assisted acquisition.

VERIFIABLE CLAIM · BUSINESS MODEL · HIGH

June 2026 gross margin was 81% based on recognized subscription revenue and direct service costs.

VERIFIABLE CLAIM · BUSINESS MODEL · MEDIUM

Average June 2026 subscription revenue was USD 1,000 per paying location.

DIFFERENTIATION

Operational depth, not another dashboard

CAPABILITY	LUMEN ORCHARD	UTILITY DASHBOARD	GENERIC ANALYTICS	CONTROLS CONTRACTOR
Refrigeration-specific anomaly models	• Strong	○	△	△
Weather + throughput normalization	• Strong	△	•	○
Measured savings workflow	• Strong	△	△	△
Portfolio-level rollout	• Strong	•	•	○

VERIFIABLE CLAIM • PRODUCT • MEDIUM

As of June 30, 2026, the platform included refrigeration-specific anomaly rules, weather normalization, and portfolio-level deployment templates.

TEAM

Product, energy systems, and software execution

CEO · Primary contact

Avery Rowan

Product and energy-systems operator responsible for customer discovery, deployment design, and commercial execution.

CTO

Jordan Vale

Software engineering and operations leader responsible for the data platform, integrations, and production reliability.

VERIFIABLE CLAIM · FOUNDER · HIGH

Avery Rowan and Jordan Vale have worked full-time on Lumen Orchard Labs since March 14, 2024.

VERIFIABLE CLAIM · FOUNDER · MEDIUM

The two-person founding team shipped the first production deployment in November 2024.

THE ROUND

USD 400,000 to turn early repeatability into a scalable motion

\$400k

TARGET RAISE

\$4.0m

POST-MONEY SAFE CAP

VERIFIABLE CLAIM • DEAL TERMS • CRITICAL

The company is raising USD 400,000 using a post-money SAFE with a USD 4,000,000 valuation cap.

Use of funds

VERIFICATION PACKAGE

Evidence required to validate highlighted claims

CLAIM GROUP	PRIMARY EVIDENCE	INDEPENDENT CONFIRMATION
Paying locations, MRR, ARR, retention	Customer-level billing export dated June 30, 2026	Accountant revenue review + two customer confirmations
12.1% electricity reduction	Frozen baselines and interval-meter result workbook	Two customer energy reports from separate organizations
Deployment time and expansion	Signed deployment acceptance records	Customer implementation confirmations
Founder roles and start date	Employment/IP assignment agreements	Corporate registry and professional histories
SAFE terms and ownership	Board-approved SAFE draft and cap table	Legal counsel confirmation

IMPORTANT

This application currently verifies public web evidence only. Private supporting documents must be added to the product or seeded as test fixtures before these synthetic claims can become genuinely verified.
